The new Chiclayo headquarters of Clínicas Auna will be a benchmark in health for the north of Peru

- It has infrastructure and installed capacity of high international standards.
- More than 400 doctors and assistance personnel are available to citizens.
- It is the seventh Auna Clinic headquarters to be implemented nationwide.

Auna inaugurated its new Auna Clinics headquarters in the city of Chiclayo to transform the health experience and provide a new and better quality standard committed to caring for the lives of more people. The headquarters has more than 400 doctors and highly qualified professional healthcare personnel available to all citizens of Chiclayo and the northern region of Peru. With this opening, Clínicas Auna adds its seventh headquarters at the national level and ninth at the regional level, consolidating itself, as well as a benchmark health institution of the private sector in Latin America.

Clínicas Auna headquarters, Chiclayo, was conceived from the beginning as a health center of excellence carried out under high international quality standards, with first-rate equipment, technology and personnel. Along these lines, it will provide care in more than forty specialties and subspecialties, equipped to perform highly complex surgeries. "*At Auna we have the aspiration that more people in the region can benefit from accessing a comprehensive health service dedicated not only to healing but to taking care of their well-being. Therefore, we are committed to the development of the health sector through innovative projects that attract investment to the region and the city of Chiclayo, such as this new headquarters, also having the best specialists, medical equipment and cutting-edge technology so that the people can enjoy a long and healthy life.*", said Carlos Cornejo, General Manager of Clínicas Auna, Chiclayo headquarters.

The implementation has considered rooms and specialized equipment, having among the most important spaces: four highly complex operating rooms, the first scanner in Latin America with an artificial intelligence simulator for radiotherapy, one of the most modern emergency areas and one of the best gastroenterology rooms of the country.
