STATE STREET CORPORATION

Earnings Release Addendum

RECONCILIATIONS OF OPERATING-BASIS (NON-GAAP) FINANCIAL INFORMATION

In addition to presenting State Street's financial results in conformity with U.S. generally accepted accounting principles, referred to as GAAP, management also presents results on a non-GAAP, or "operating" basis, as it believes that this presentation supports meaningful comparisons from period to period and the analysis of comparable financial trends with respect to State Street's normal ongoing business operations.

Management believes that operating-basis financial information, which reports revenue from non-taxable sources, such as interest revenue from tax-exempt investment securities and processing fees and other revenue associated with tax-advantaged investments, on a fully taxable-equivalent basis and excludes the impact of revenue and expenses outside of State Street's normal course of business, facilitates an investor's understanding and analysis of State Street's underlying financial performance and trends in addition to financial information prepared and reported in accordance with GAAP. Non-GAAP financial measures should be considered in addition to, not as a substitute for or superior to, financial measures determined in conformity with GAAP.

This earnings release addendum presents financial information prepared on a GAAP as well as on an operating basis, and accordingly provides reconciliations of operating-basis financial measures. The following tables reconcile operating-basis financial information presented in the earnings release to financial information prepared and reported in conformity with GAAP.

STATE STREET CORPORATION

Earnings Release Addendum

REGULATORY CAPITAL

This earnings release addendum presents capital ratios in addition to, or adjusted from, those calculated in conformity with currently applicable regulatory requirements. These include capital ratios based on tangible common equity and tier 1 risk-based common capital, as well as capital ratios adjusted to reflect our estimate of the impact of the proposed Basel III capital requirements. These non-regulatory and adjusted capital measures are non-GAAP financial measures. Management currently calculates the non-GAAP capital ratios presented in this earnings release addendum to aid in its understanding of State Street's capital position under a variety of standards, including currently applicable and evolving regulatory requirements. Management believes that the use of the non-GAAP capital ratios presented in this earnings release addendum similarly aids in an investor's understanding of State Street's capital position and therefore is of interest to investors.

The total risk-based capital, tier 1 risk-based capital and tier 1 leverage ratios, as applicable, are each calculated in conformity with currently applicable regulatory requirements. The total risk-based capital, tier 1 risk-based capital and tier 1 leverage ratios are used regularly by bank regulatory authorities to evaluate State Street's capital adequacy. The tangible common equity, or TCE, ratio is an additional capital ratio that management believes provides additional context for understanding and assessing State Street's capital adequacy. The tier 1 risk-based common, or tier 1 common, ratio is used by the Federal Reserve in connection with its capital assessment and review programs.

The TCE ratio is calculated by dividing consolidated total common shareholders' equity by consolidated total assets, after reducing both amounts by goodwill and other intangible assets net of related deferred taxes. Total assets reflected in the TCE ratio also exclude cash balances on deposit at the Federal Reserve Bank and other central banks in excess of required reserves. The TCE ratio is not required by GAAP or by bank regulations, but is a metric used by management to evaluate the adequacy of State Street's capital levels. Since there is no authoritative requirement to calculate the TCE ratio, our TCE ratio is not necessarily comparable to similar capital measures disclosed or used by other companies in the financial services industry. Tangible common equity and adjusted tangible assets are non-GAAP financial measures and should be considered in addition to, not as a substitute for or superior to, financial measures determined in accordance with GAAP. Reconciliations with respect to the calculation of the TCE ratios as of December 31, 2013, September 30, 2013 and December 31, 2012 are provided in this earnings release addendum.

The tier 1 common ratio is calculated by dividing (a) tier 1 risk-based capital, which is calculated in conformity with currently applicable regulatory requirements, less non-common elements including qualifying perpetual preferred stock, qualifying minority interest in subsidiaries and qualifying trust preferred securities, by (b) total risk-weighted assets, which assets are calculated in conformity with currently applicable regulatory requirements. The tier 1 common ratio is not required by GAAP or by currently applicable regulatory capital rules. Management is currently monitoring this ratio, along with the other capital ratios described in this earnings release addendum, in evaluating State Street's capital levels and believes that, at this time, the ratio may be of interest to investors. Reconciliations with respect to the tier 1 common ratios as of December 31, 2013, September 30, 2013 and December 31, 2012 are provided in this earnings release addendum.

The following table presents State Street's regulatory capital ratios and underlying components, calculated in conformity with currently applicable regulatory requirements.

(Dollars in millions)	**December 31, 2013**	September 30, 2013	December 31, 2012
RATIOS:			
Tier 1 risk-based capital	**17.3%**	17.3%	19.1%
Total risk-based capital	**19.7%**	19.8	20.6
Tier 1 leverage	**6.9**	7.2	7.1

STATE STREET CORPORATION

Earnings Release Addendum

RECONCILIATIONS OF TIER 1 COMMON RATIOS

In June 2012, U.S. banking regulators issued three Notices of Proposed Rulemaking, or NPRs. These NPRs proposed to revise the current U.S. regulatory capital framework and incorporate previous changes made by the Basel Committee on Banking Supervision to the Basel capital framework, and also proposed to implement relevant provisions of the Dodd-Frank Wall Street Reform and Consumer Protection Act and restructure the U.S. capital rules into a harmonized, codified regulatory capital framework. On July 2, 2013, the Federal Reserve issued a rule intended to implement the Basel III framework in the U.S. The final rule consolidates, with revisions, the three NPRs originally issued by the Federal Reserve in June 2012. Provisions of the final rule become effective under a transition timetable which began on January 1, 2014. Under the final rule, State Street will be subject to the lower of its tier 1 common ratio calculated under the Basel III standardized approach, referred to as the standardized approach, and under the Basel III advanced approach, referred to as the advanced approach, in the assessment of its capital adequacy for regulatory purposes. These calculations differ from those done in conformity with the June 2012 NPRs. The following tables reconcile State Street's estimated tier 1 common ratios calculated in conformity with the July 2013 final rule, as State Street currently understands the impact of those requirements(1), to State Street's tier 1 common ratio calculated using currently applicable regulatory requirements under the Basel I rules.

As of December 31, 2013 (Dollars in millions)	Currently Applicable Regulatory Requirements[2]		Basel III Final Rule Standardized Approach (Estimated)[3]	Basel III Final Rule Advanced Approach (Estimated)[3]
Tier 1 risk-based capital	**$ 13,895**		**$ 13,176**	**$ 13,176**
Less:				
Trust preferred securities	**950**		**475**	**475**
Preferred stock	**491**		**491**	**491**
Plus:				
Other	**—**		**119**	**119**
Tier 1 common capital	**12,454**	**A**	**12,329**	**12,329**
Total risk-weighted assets	**80,138**	**B**	**121,587**	**104,739**
Tier 1 common ratio	**15.5%**	**A/B**	**10.1%**	**11.8%**

As of September 30, 2013 (Dollars in millions)	Currently Applicable Regulatory Requirements[2]		Basel III Final Rule Standardized Approach (Estimated)[4]	Basel III Final Rule Advanced Approach (Estimated)[4]
Tier 1 risk-based capital	$ 13,911		$ 13,199	$ 13,199
Less:				
Trust preferred securities	950		475	475
Preferred stock	490		490	490
Plus:				
Other	—		56	56
Tier 1 common capital	12,471	C	12,290	12,290
Total risk-weighted assets	80,362	D	120,454	108,954
Tier 1 common ratio	15.5 %	C/D	10.2 %	11.3 %

(1) Estimated Basel III tier 1 common ratios are preliminary, reflect tier 1 common equity calculated under the July 2013 final rule as applicable on its January 1, 2014 effective date, and are based on State Street's present interpretations, expectations and understanding of the final rule as of the respective date of each estimate's first public announcement. Refer to the "Capital" section of the news release with which this addendum is included for important information about the July 2013 final rule, State Street's calculations of its tier 1 common ratios thereunder and factors that could influence State Street's calculations of its tier 1 common ratios. Unless otherwise specified, all capital ratios refer to State Street Corporation and not State Street Bank and Trust Company.

(2) The tier 1 common ratio was calculated by dividing (a) tier 1 risk-based capital, calculated in conformity with currently applicable regulatory requirements, less non-common elements including qualifying perpetual preferred stock, qualifying minority interest in subsidiaries and qualifying trust preferred securities (tier 1 common capital) by (b) total risk-weighted assets, calculated in conformity with currently applicable regulatory requirements.

(3) As of December 31, 2013, for purposes of the calculations done in conformity with the July 2013 final rule, capital and total risk-weighted assets under both the standardized approach and the advanced approach were calculated using State Street's estimates, based on the provisions of the final rule expected to affect capital in 2014. The tier 1 common ratio was calculated by dividing (a) tier 1 common capital (as described in footnote (2)), but with tier 1 risk-based capital calculated in conformity with the final rule, by (b) total risk-weighted assets, calculated in conformity with the final rule.

• Under both the standardized and advanced approaches, tier 1 risk-based capital decreased by $719 million, as a result of applying the estimated effect of the final rule to tier 1 risk-based capital of $13.895 billion as of December 31, 2013.
• Under both the standardized and advanced approaches, tier 1 common capital used in the calculation of the tier 1 common ratio was $12.329 billion, reflecting the adjustments to tier 1 risk-based capital described in the first bullet above. Tier 1 common capital used in the calculation was therefore calculated as adjusted tier 1 risk-based capital of $13.176 billion less non-common elements of capital, composed of trust preferred securities of $475 million, preferred stock of $491 million, and other adjustments of $119 million as of December 31, 2013, resulting in tier 1 common capital of $12.329 billion. As of December 31, 2013, there was no qualifying minority interest in subsidiaries.
• Under the standardized approach, total risk-weighted assets used in the calculation of the tier 1 common ratio increased by $41.449 billion as a result of applying the provisions of the final rule to total risk-weighted assets of $80.138 billion as of December 31, 2013. Under the advanced approach, total risk-weighted assets used in the calculation of the tier 1 common ratio increased by $24.601 billion as a result of applying the provisions of the final rule to total risk-weighted assets of $80.138 billion as of December 31, 2013.

(4) As of September 30, 2013, for purposes of the calculations done in conformity with the July 2013 final rule, capital and total risk-weighted assets under both the standardized approach and the advanced approach were calculated using State Street's estimates, based on the provisions of the final rule expected to affect capital in 2014. The tier 1 common ratio was calculated by dividing (a) tier 1 common capital (as described in footnote (2)), but with tier 1 risk-based capital calculated in conformity with the final rule, by (b) total risk-weighted assets, calculated in accordance with the final rule.

• Under both the standardized and advanced approaches, tier 1 risk-based capital decreased by $712 million, as a result of applying the estimated effect of the final rule to tier 1 risk-based capital of $13.911 billion as of September 30, 2013.
• Under both the standardized and advanced approaches, tier 1 common capital used in the calculation of the tier 1 common ratio was $12.290 billion, reflecting the adjustments to tier 1 risk-based capital described in the first bullet above. Tier 1 common capital used in the calculation was therefore calculated as adjusted tier 1 risk-based capital of $13.199 billion less non-common elements of capital, composed of trust preferred securities of $475 million, preferred stock of $490 million, and other adjustments of $56 million as of September 30, 2013, resulting in tier 1 common capital of $12.290 billion. As of September 30, 2013, there was no qualifying minority interest in subsidiaries.
• Under the standardized approach, total risk-weighted assets used in the calculation of the tier 1 common ratio increased by $40.092 billion as a result of applying the provisions of the final rule to total risk-weighted assets of $80.362 billion as of September 30, 2013. Under the advanced approach, total risk-weighted assets used in the calculation of the tier 1 common ratio increased by $28.592 billion as a result of applying the provisions of the final rule to total risk-weighted assets of $80.362 billion as of September 30, 2013.

STATE STREET CORPORATION
Earnings Release Addendum
RECONCILIATIONS OF TIER 1 COMMON RATIOS

State Street disclosed its estimated Basel III tier 1 common ratios as of September 30, 2012 based on its understanding of the June 2012 NPRs, and those calculations differ from those done in conformity with the July 2013 final rule. The following table reconciles State Street's estimated tier 1 common ratios calculated in conformity with the June 2012 NPRs, as State Street understood the impact of those proposed requirements(1), to State Street's tier 1 common ratio calculated using currently applicable regulatory requirements under the Basel I rules.

As of December 31, 2012 (Dollars in millions)	Currently Applicable Regulatory Requirements[2]		Basel III NPRs with Impact of SSFA (Estimated)[3]	Basel III NPRs with SSFA and Run-Off/ Reinvestment (Estimated)[4]
Tier 1 risk-based capital	$ 13,760		$ 13,252	$ 13,252
Less:				
Trust preferred securities	950		713	713
Preferred stock	489		489	489
Plus:				
Other	—		60	60
Tier 1 common capital	12,321	E	12,110	12,110
Total risk-weighted assets	71,907	F	112,484	102,120
Tier 1 common ratio	17.1%	E/F	10.8%	11.9%

(1) The estimated Basel III tier 1 common ratios presented in the table above as of December 31, 2012 were estimates by State Street, calculated pursuant to the advanced approach in conformity with the June 2012 NPRs. The calculations were based on State Street's interpretations, expectations and understanding of the June 2012 NPRs as of the date of the estimates' first public announcement. Refer to the "Capital" section of the news release with which this addendum is included for important information about the June 2012 NPRs, State Street's calculations of its tier 1 common ratios thereunder and factors that could influence State Street's calculations of its tier 1 common ratios. Unless otherwise specified, all capital ratios refer to State Street Corporation and not State Street Bank and Trust Company.

(2) The tier 1 common ratio was calculated by dividing (a) tier 1 risk-based capital, calculated in accordance with currently applicable regulatory requirements, less non-common elements including qualifying perpetual preferred stock, qualifying minority interest in subsidiaries and qualifying trust preferred securities (tier 1 common capital) by (b) total risk-weighted assets, calculated in accordance with currently applicable regulatory requirements.

(3) As of December 31, 2012, for purposes of the calculations in done conformity with the June 2012 NPRs, capital and total risk-weighted assets were calculated using State Street's estimates, based on the provisions of the NPRs expected to affect capital in 2013. The tier 1 common ratio was calculated by dividing (a) tier 1 common capital (as described in footnote (2)), but with tier 1 risk-based capital calculated in conformity with the June 2012 NPRs, by (b) total risk-weighted assets, calculated in accordance with the June 2012 NPRs.

• Tier 1 risk-based capital decreased by $508 million, as a result of applying the estimated effect of the June 2012 NPRs to tier 1 risk-based capital of $13.760 billion as of December 31, 2012.
• Tier 1 common capital used in the calculation of the tier 1 common ratio was $12.110 billion, reflecting the adjustments to tier 1 risk-based capital described in the first bullet above. Tier 1 common capital used in the calculation was therefore calculated as adjusted tier 1 risk-based capital of $13.252 billion less non-common elements of capital, composed of trust preferred securities of $713 million, preferred stock of $489 million, and other adjustments of $60 million as of December 31, 2012, resulting in tier 1 common capital of $12.110 billion. As of December 31, 2012, there was no qualifying minority interest in subsidiaries.
• Total risk-weighted assets used in the calculation of the tier 1 common ratio increased by $40.577 billion as a result of applying the provisions of the June 2012 NPRs, primarily the estimated impact of the Simplified Supervisory Formula Approach, or SSFA, to total risk-weighted assets of $71.907 billion as of December 31, 2012.

(4) As of December 31, 2012, presents ratios calculated in conformity with the June 2012 NPRs, as described in footnote (3), and incorporates the effect of anticipated run-off of investment securities as they mature or pay down and are replaced by subsequent reinvestment into new securities from January 2013 through December 2014. The net impact of run-off and subsequent reinvestment was estimated to reduce estimated total risk-weighted assets by $10.364 billion, from $112.484 billion to $102.120 billion.
