# New Teletrac Navman Asset Trackers Set Benchmark With One-time Install and Indoor Tracking

2025-01-23

Ten-year battery life provides for one-time install, continuous tracking of assets without disruption; assets viewed via TN360 platform

MELBOURNE, Australia--(BUSINESS WIRE)-- **Teletrac Navman**, a leading connected mobility platform and Vontier company, has unveiled significant updates to its asset tracker portfolio, with the launch of one-time install devices that include new indoor tracking capability for real-time location visibility.

The market-leading asset trackers, designed for indoor and outdoor equipment, offer a 10-year battery life that minimises disruption, lowers maintenance costs and addresses the challenges of managing assets across various locations.

The improved, high accuracy indoor tracking also makes them a perfect fit for a wide variety of applications, including warehouse asset management, construction equipment, and other high-value asset monitoring.

Further, Teletrac Navman's AI powered TN360 and TN360 ACM platforms will provide a single pane of glass view for real-time asset location. The platforms have been designed for fleet, asset and construction equipment management, providing visibility into location, maintenance and utilisation across powered and non-powered assets. This empowers businesses to make informed decisions regarding asset mobility, enhanced management efficiency, security and sustainability.

Doug Haebig, Director, Product Management at Teletrac Navman, said: "Our customers' assets are becoming more utilised and operations more dispersed and challenging to manage. The last thing you want is in-demand assets disappearing from your tracking platform because of shorter battery life or signal strength capabilities, and the associated costs of refitting them with new trackers.

“Businesses need greater robustness and functionality, as well as improved connectivity to alleviate some of their operational challenges. Our new market-leading devices will give asset managers the visibility they need to streamline and protect operations through a one-time install.”

The new features of the trackers include:

- Optimised performance: Up to 10 years battery life, for a true ‘install once’ solution with low maintenance requirements
- High Accuracy Tracking: Enhanced indoor and outdoor tracking for improved real-time asset location management
- Global Connectivity: 4G network recognition
- Theft Recovery Mode: In case of theft, ‘Recovery Mode’ can be activated to help locate and recover stolen assets
- Durable Housing: IP68 and IK07 rated to withstand the harshest of environments
- Self-installation: Designed for easier deployment and usage across dynamic operational environments.

Teletrac Navman’s existing range of asset tracking devices has been highly successful with thousands of units in the field tracking non-powered assets and has a wide variety of applications. The business has seen demand remain high for asset tracking leading it to develop new functionality and capabilities to suit different use cases.

## About Teletrac Navman

Teletrac Navman’s goal is to empower the industries that transform and sustain our futures with simple and intelligent solutions that enhance the efficiency, safety, and sustainability of their operation. As a connected mobility platform for industries that manage vehicle and equipment assets, Teletrac Navman simplifies the complex so that its customers can transform the way they work through cloud-based solutions that leverage AI to unlock the power of operational insight.
