

News Release

# Vontier Showcases Unified Payment, Smarter Management, and Future-Focused Solutions at NACS 2025

2025-10-14

Highlighting advancements in remote management, wetstock intelligence, productivity, and unified customer experiences across the forecourt and store

RALEIGH, N.C.--(BUSINESS WIRE)-- **Vontier Corporation** (“Vontier”) (NYSE: VNT), a global industrial technology company helping convenience retailers, fleet operators, and auto repair technicians unlock growth and improve productivity, will present a series of technology advancements at the 2025 **NACS Show** (Booth #S4100) in Chicago, October 14–17. Centered on four core themes – Unified Payment & Customer Experience, Remote Management, Productivity and Future of Mobility – Vontier’s brands will showcase how retailers can streamline operations, strengthen customer engagement, and prepare for an evolving multi-energy future.

“Vontier’s approach this year is about making proven technologies work harder for retailers,” said Andy Bennett, Group President of Convenience Retail at Vontier. “We’re building momentum toward a more connected, future-ready convenience experience – one that helps retailers manage today’s complexities while laying the groundwork for where mobility is headed.”

## Unified Payment & Customer Experience

Vontier is debuting new advancements across its FlexPay 6 family, recognized as the only payment platform certified for both indoor and outdoor use across retailers’ sites. This certification helps lower costs for retailers while enabling a consistent consumer experience across fueling, EV charging, and car wash operations. The platform’s flexible and secure payment infrastructure supports the growing media networks designed to increase customer engagement. Retailers benefit from centralized management of media, customer prompts, and maintenance, while integration with DRB car wash automation and Passport POS systems further elevates the in-

store and forecourt customer journey.

## Remote Management

Remote Management is a central focus at booth #S4100, where Vontier is unveiling the Veeder-Root Device Management application on The Hub – its most significant new capability at the show. This platform enables end-to-end management of automatic tank gauge networks, including remote software deployment, backups and predictive analytics utilizing the TLS-450plus as an advanced edge device for site sensors and equipment.

Integral to the remote management suite for dispensers is the new Pump Control Node 5 (PCN5) hardware, which revolutionizes dispenser control by enabling retailers to remotely adjust fuel blend ratios, such as seasonal switches between summer and winter fuels. This capability can save multiple truck rolls per site annually. When combined with a Forecourt (Insite360) subscription, PCN5 supports cloud connectivity and allows software updates to be performed remotely with a simple press of a button. Together, these enhancements reduce the need for onsite technician visits, enable maintenance to be scheduled strategically for minimal disruption, and significantly improve system uptime and reliability.

Within this Remote Management umbrella, Wetstock Management is a critical component that helps retailers maintain precise control over their fuel inventory and compliance requirements.

A Wetstock Management subscription delivers advanced alerting and alarm management designed to detect fuel theft or tampering on the forecourt, alongside real-time visibility into tank and pump health. These capabilities support predictive maintenance and regulatory compliance, reducing operational risk.

To enhance operational insights beyond forecourt management, open APIs on The Hub enable third-party integrations, such as the collaboration with Plexor.AI, which leverages indoor sales data and analytics to combat retail shrink. Together, these tools provide retailers with centralized management and actionable intelligence to safeguard assets and optimize overall site performance.

## Productivity

The Productivity theme highlights scalable solutions that decouple legacy monolithic systems and accelerate digital transformation. Vontier's Passport Enterprise and DOMS Forecourt Automation make it easier for retailers to deploy and integrate solutions across multiple POS environments, providing centralized control, enhanced security, and operational resilience via isolated, remote-managed networks. The Smart Dispenser and iNFX Electronic Payment Server contribute to increased system uptime by simplifying upgrades and performance monitoring across forecourt hardware. Retail and POS innovations include new kiosk hardware

formats supporting Passport Express Ordering and Express Lane. Additionally, software features such as TruAge age verification, digital coupons, tipping, and charity donations extend engagement opportunities beyond the pump to mobile apps and store environments.

## Future of Mobility

Looking ahead to the Future of Mobility, Vontier will present the Konect 400kW EV Charger, offering a turnkey hardware and software solution that supports scalable, future-proof site electrification. New Encore Flex Fuel configurations enable compatibility with multiple fuel types, allowing retailers to offer a seamless fueling experience regardless of energy source. All these solutions work in conjunction with the FlexPay 6 platform to deliver a consistent, customer-friendly payment experience across diverse fueling modalities.

Mark Morelli, President and CEO of Vontier, said, "Every advancement we're presenting – from remote diagnostics to unified payments – represents practical progress toward smarter, more efficient, and resilient convenience retail operations. Our mission is to enable our customers to overcome today's challenges while positioning them for the diverse and rapidly evolving energy future."

## About Vontier

Vontier (NYSE: VNT) is a global industrial technology company uniting productivity, automation and multi-energy technologies to meet the needs of a rapidly evolving, more connected mobility ecosystem. Leveraging leading market positions, decades of domain expertise and unparalleled portfolio breadth, Vontier enables the way the world moves – delivering smart, safe and sustainable solutions to our customers and the planet. Vontier has a culture of continuous improvement and innovation built upon the foundation of the Vontier Business System and embraced by colleagues worldwide.
