

Vontier Surpasses 2030 Emissions Target Five Years Early, Sets New 65% Reduction Goal

2026-06-11

Mobility technology company publishes 2026 Sustainability Report, reduces Scope 1 and 2 emissions by 49%, achieves best-in-class safety metrics

RALEIGH, N.C.--(BUSINESS WIRE)-- Vontier (NYSE: VNT), a leading global provider of critical technologies and solutions to connect, manage and scale the mobility ecosystem, today released its 2026 Sustainability Report, highlighting the company's success in delivering on its mission to mobilize the future to create a better world.

Vontier publishes annual sustainability report, beating 2030 emissions target five years early. Among the key findings: Vontier has reduced its absolute Scope 1 and 2 emissions by 49%, surpassing its 2030 target five years ahead of schedule. The company is now setting an accelerated target of a 65% absolute reduction by 2030.

In addition to its climate achievements, Vontier reached its 2030 waste diversion goal early by diverting 91% of manufacturing site waste from landfills. The company also generated \$8.4 million in operational cost savings via internal efficiency initiatives.

Vontier serves as a connective layer across the mobility economy, helping customers in convenience retail, fleet solutions and automotive repair navigate simultaneous digital and energy transitions – removing what the company calls the ‘complexity tax’ on productivity and progress.

“Vontier sits at the intersection of mobility and technology, and we use that position to help enable a multi-energy future,” said Mark Morelli, President and CEO of Vontier. “In 2025, we achieved a major milestone of reducing

our Scope 1 and 2 emissions by 49%, five years ahead of our 2030 target, demonstrating what's possible through innovation, operational efficiency and accountability. As we look ahead, we remain focused on setting ambitious goals, maintaining transparent governance practices and continuing to shape a more sustainable future for our customers and communities."

"Reaching our 2030 emissions targets five years ahead of schedule is another incredible testament to the ingenuity and commitment of our global team," said Katie Rowen, EVP, Chief Transformation & Operations Officer. "This step-change in our emissions wasn't traced back to a single project; it was achieved by tapping into the collective expertise of our workforce, customers and suppliers. Vontier's next phase of growth is about scaling what works, deepening accountability and continuing to support customers through multi-energy innovations."

Productivity at scale: Driving efficiency through VBS

Vontier's operational results were driven by the Vontier Business System (VBS), an enterprise-wide framework rooted in kaizen (continuous improvement) that turns operational complexity into frictionless performance. VBS connected employees, processes and technology to yield more than 200 completed kaizens globally in 2025:

- **Greensboro campus innovations:** At Vontier's largest manufacturing facility in Greensboro, N.C., a facility maintenance team member installed timers on more than 50 exhaust fans to ensure they only operate during occupied hours.
- **Accelerated capability:** Vontier continued to scale its VBS Ignite career development program to compress three years of business experience into three months, enabling participants to drive immediate operational throughput improvements.

Modern mobility infrastructure: First-of-its-kind lifecycle milestones

Vontier meets customers where they are to transition legacy systems into continuous capability, deploying intelligent hardware and cloud connectivity to future-proof operations:

- **Industry-first assessment:** Vontier became the first company in the world to complete an end-to-end lifecycle assessment (LCA) of a fueling dispenser based on its SK700-II model. Aligned with ISO 14040/14044 standards, upgrades identified through the process will help reduce customers' Scope 1 and 2 dispenser lifecycle emissions significantly.
- **Alternative fuel infrastructure:** **ANGI Energy** advanced its commercial fleet positioning in compressed natural gas (CNG) and renewable natural gas (RNG), delivering fueling solutions that offer up to 80% lower fuel costs than diesel while reducing fleet carbon footprints.

Scaling smart, connected systems

Vontier powers smart charging, energy management and customer engagement at scale, connecting forecourts to retail and loyalty:

- **Global EV charging software: Driivz**, Vontier's EV charging and energy management platform, expanded its footprint to 36 countries, supporting more than 3 million charging points and 6 million drivers. In 2025, the platform enabled the avoidance of 1,014,000 metric tonnes of CO₂e, delivered 1.34 TWh of energy and supported 6.7 billion kilometers of electric driving.
- **Sheetz platform deployment**: Long-standing client Sheetz integrated Driivz software across 125 EV charging stations in seven states, linking charging hardware directly to point-of-sale apps, loyalty rewards and real-time session tracking.

Noteworthy workplace safety records

Vontier builds forward-looking flexibility and total operational integrity into its workforce. In 2025, the company achieved safety metrics well ahead of its corporate timelines:

- **Significant incident reductions**: Vontier's Total Recordable Incident Rate (TRIR) fell to 0.19, representing a 67% reduction from its 2022 baseline. Its Days Away, Restricted, or Transferred (DART) rate dropped to 0.14, a 65% reduction over the same period.
- **Best-in-class certification record**: Vontier's global manufacturing sites achieved 100% ISO 45001 occupational health and safety certification, up from 78% in 2024, and sustained 100% ISO 14001 environmental management certification.
- **Zero-incident operations**: Multiple global business units — including operations in Argentina, Chile, EMEA and Southeast Asia, alongside Driivz, Teletrac Navman and DRB — completed the full calendar year with zero recordable incidents.

Elite third-party validation

Vontier's system-level momentum was confirmed by prominent global corporate governance and responsibility rating organizations in 2025:

- **EcoVadis**: Awarded a Gold rating, placing Vontier in the top 5% of companies assessed globally.
- **CDP**: Earned straight "A" ratings in both Climate Change and Supplier Engagement.
- **TIME and Statista**: Recognized on TIME's World's Most Sustainable Companies list for the second consecutive year.
- **Newsweek**: Ranked #81 on Newsweek's America's Most Responsible Companies list, rising from its initial appearance at #543 in 2023.

Community giving & social impact

Vontier continues to support economic empowerment and human dignity across the local communities it serves. During 2025, approximately 1,000 employees contributed more than 4,350 volunteer hours through "Day of Caring" events. The company facilitated over \$1 million in total corporate and employee charitable donations to more than a hundred organizations globally.
