

NEWS RELEASE

Broadridge Expands Next-gen Digital Assets Capabilities to U.S. Wealth Management Firms

2026-09-14

Unified platform enables advisor-led and self-directed access to cryptocurrencies and tokenized assets alongside traditional investments

NEW YORK, Sept. 14, 2026 /PRNewswire/ -- **Broadridge**, (NYSE: BR) today announced the expansion of its next-generation digital assets platform for wealth management firms to the U.S. market. The platform provides wealth managers a unified way to offer cryptocurrencies and tokenized securities alongside traditional investments. Building on the platform's availability in Canada, Broadridge enables U.S. broker-dealers, registered investment advisers and wealth managers to incorporate digital assets into their existing wealth offerings through a unified operating model.

Supported by a growing ecosystem of providers, initially **Anchorage Digital** and **Galaxy Digital**, the platform supports both cryptocurrencies and tokenized securities issued and serviced through new and established market infrastructure, enabling firms to add new assets and transaction types to systems and workflows they already use.

"Digital assets are moving from the margins to the mainstream investment conversations for U.S. investors, advisors and wealth managers," said Tom Carey, Broadridge's Global Head of Product and Technology. "Our platform helps firms extend the trusted wealth experience they already provide to include digital assets, while managing the operational complexity behind the scenes. By bringing traditional and digital investments together in a single environment, we are helping clients expand investor choice while maintaining the controls, service model and experience their businesses require."

Beginning with Anchorage Digital and Galaxy, the platform's growing ecosystem of custodians, wallet infrastructure providers, liquidity providers, and compliance partners gives firms flexibility as their digital asset strategies, client

needs and market connectivity requirements evolve.

"Crypto is no longer a side conversation in wealth management, it's the conversation," said Nathan McCauley, CEO and Co-Founder of Anchorage Digital. "As American's first federally chartered digital asset bank, we're proud to bring institutional-grade custody and settlement to Broadridge's platform, so U.S. wealth managers can offer their clients digital assets with the same trust and rigor as everything else in their portfolios."

"As a global leader in digital assets, Galaxy is pleased to combine its digital asset market infrastructure and capabilities with Broadridge's established wealth management platform as the company expands its next generation digital asset capabilities to US wealth management firms," said Mike Novogratz, founder and CEO of Galaxy.

Broadridge's integrated digital asset capabilities include:

- Support for cryptocurrencies and tokenized real-world assets, including equities, funds, and private or alternative investments via DLX, Broadridge's market-leading tokenization and digital assets infrastructure platform
- Flexible support for both advisor-led and self-directed wealth management models
- Integration with existing Broadridge or Third-Party books and records systems enabling firms to leverage existing integrations and downstream services such as regulatory reporting, statements, confirms and tax
- A unified client experience that brings traditional and digital assets together, with integrated disclosure, governance and compliance-support capabilities, including both retail and institutional proxy voting and critical regulatory disclosures
- Integrated wallets and institutional-grade custody, including omnibus and segregated wallet structures and multi-custodian capabilities
- Infrastructure designed to support the continuous, always-on nature of digital asset markets and operations

For U.S. wealth managers, the opportunity is not simply to add a new investment option, but to integrate digital assets into established client, advisor, operations and supervisory workflows. Broadridge's platform is designed to simplify processing across trading, custody, asset servicing, communications, governance and proxy voting, helping firms deliver a more cohesive experience throughout the investment lifecycle.

About Broadridge's Tokenization Solutions

Broadridge enables on-chain proxy voting and governance, digital asset infrastructure including post trade, wallets and custody, and the scaling of digital asset capabilities across multiple asset classes. Broadridge's governance platform serves all models of tokenized securities, including issuer-listed models, synthetic securities issued outside

the United States, and third-party tokenized shares within the United States, helping ensure investors receive the same rights and protections regardless of how assets are structured or owned.

DLX is Broadridge's tokenization platform, designed to help financial institutions operate across the lifecycle of tokenized securities. It brings together solutions spanning issuance, trading, financing, settlement and servicing, including its **Distributed Ledger Repo (DLR)** solution, the world's largest institutional platform for settling tokenized real assets, tokenizing over \$351 billion a day. DLR supports repo transactions, intraday repo activity, collateral movements, settlement and servicing needs through established scale, critical market knowledge and technology designed for real-world market operations. As tokenization gains momentum across financial services, Broadridge is abstracting away the complexity and enabling a unified experience across traditional and digital assets.
