

# LTX Launches Agentic AI in BondGPT, Turning AI Insights into Trading Action

2026-06-16

Broadridge-backed LTX integrates real-time, actionable agentic AI directly into daily fixed income trading workflows

NEW YORK, June 16, 2026 /PRNewswire/ -- **LTX**, an AI-powered corporate bond e-trading venue backed by global Fintech leader, **Broadridge Financial Solutions, Inc.** (NYSE:BR), today announced the launch of new agentic capabilities in its award-winning BondGPT application that enable users to create AI agents that advance investing and trading workflows on the LTX trading platform. Agentic capabilities include monitoring real-time market conditions, surfacing opportunities, and taking other predefined actions such as creating a trade ticket or launching a trade on their behalf.

"Agentic BondGPT brings practical, trader-controlled AI into fixed income investing and trading workflows by helping market participants define what matters, monitor the market continuously, and respond faster when the conditions they are looking for appear," said Jim Kwiatkowski, CEO of LTX. "When we launched BondGPT, our goal was to make it easier and faster for traders to discover information and uncover opportunities. Agentic AI capabilities in BondGPT present the next step in that journey, enabling traders to delegate tasks and move more seamlessly from discovery and analysis to implementation and execution."

Beyond receiving fast answers to complex bond-related questions, BondGPT users can now easily create agents using simple instructions that can take trading workflow actions when user-defined market conditions take place. BondGPT agents can generate automated alerts, create trade tickets, make dealer selections, launch RFQs, accept prices to automatically execute, and other workflow tasks, all under trader-defined parameters and human oversight. BondGPT's agentic AI-powered capabilities are designed to help users safely delegate select tasks while keeping the trader in control. Guardrails include human-in-the-loop approvals, policy-driven limits on trade size and scope, built-in explainability before all actions, and full auditability of all actions.

The launch comes amid continued growth across the LTX platform, with Goldman Sachs, J.P. Morgan, TD Securities (through its subsidiary, TD Financial Products LLC), Morgan Stanley, and Bank of America **recently joining** as fully integrated liquidity providers. Together with more than 40 liquidity providers and 100 buy-side institutions on the platform, the expansion underscores growing industry adoption of LTX's AI-powered trading ecosystem.

The launch marks the latest milestone in LTX's AI innovation roadmap. Following the launch of BondGPT in 2023, the first generative AI application built specifically for corporate bond trading, LTX has continued to expand its AI-powered functionality. Based on client input and technological developments over the last three years, BondGPT is designed to better help market participants navigate increasingly complex and fragmented markets. LTX's leadership in this space has already been recognized externally, with the platform winning the Markets Media Markets Choice Award for Best in AI for the last four consecutive years.
