NEWS RELEASE

Talos, Marex, and Broadridge to Enable Institutional Trading of DTCC-Tokenized Securities for Financing Beyond Market Hours

2026-11-17

Integrated workflow will bring together execution, prime brokerage and post-trade processing to help institutions put collateral to work without rebuilding operations

NEW YORK, Nov. 17, 2026 /PRNewswire/ -- **Talos**, **Marex Group Limited** (NASDAQ: MRX) and **Broadridge** (NYSE: BR) today announced a collaboration to enable institutional trading and financing of tokenized securities, and the mobilization of collateral beyond traditional market hours. The collaboration supports the DTCC Tokenization Service, which **launched** on October 28, bringing tokenized versions of U.S. Treasuries, Russell 1000 equities and major index ETFs to market.

Building on their participation in DTCC's July 2026 **production transactions**, the three firms will connect execution, prime brokerage and post-trade processing in a single workflow. The goal is to give institutions greater flexibility over when they access funding and how they deploy collateral, while retaining the operating models they already use. The initial focus will be financing tokenized U.S. Treasuries.

Marex will provide prime brokerage to clients financing tokenized Treasuries, and Talos will provide execution technology, connecting trading counterparties through its request for quote (RFQ) network. Talos will integrate with DLX, Broadridge's always-on, multi-asset digital operating system for tokenized finance, whose settlement orchestrator will enable atomic settlement on-chain and connect that activity to the books and records, interest calculations and P&L reporting that institutional operations teams rely on today.

"Tokenization will reach its potential when the institutions that already anchor today's markets can participate without rebuilding how they operate," said Anton Katz, CEO and Co-Founder of Talos. "Our work with Marex and

Broadridge shows how prime brokers can bring tokenized financing to their clients, with infrastructure that grows with the market."

"Our clients want to use their securities more efficiently, including putting collateral to work whenever they need funding, on timeframes measured in hours rather than days," said Stephen Hood, Head of Clearing, Americas at Marex. "Working with Talos and Broadridge, Marex intends to offer clients access to tokenized securities through the same prime brokerage relationship they rely on for their broader activity, with execution and post-trade processing designed to meet institutional standards."

"We're pleased to work with Talos to connect its execution infrastructure to DLX, enabling Marex and its clients to transact through the DTCC Tokenization Service within a connected workflow," said Horacio Barakat, Global Head of Digital Innovation at Broadridge. "It's one example of how DLX supports tokenized finance, building on Broadridge's leading position in tokenized collateral markets, where we process more than $350 billion in tokenized repo daily."
