Rubrik Introduces new Cyber Resilient Solution with Google Cloud

2025-04-09

LAS VEGAS--(BUSINESS WIRE)-- Cloud Next '25, LAS VEGAS - In its ongoing commitment to deliver comprehensive cyber resiliency, **Rubrik** (NYSE: RBRK) today announces upcoming capabilities designed to help ensure Google Cloud customers can quickly recover their business from a cyberattack or operational disruption.

Surviving a Cyberattack: Beyond Backup Recovery

“As organizations increasingly shift their business-critical data to the cloud, they're confronted with new challenges in protecting sensitive information against rapidly evolving cyber threats—challenges their traditional security technologies simply can't address,” explained Anneka Gupta, Chief Product Officer at Rubrik. “We aim to empower Google Cloud customers to address these challenges with confidence, enabling them to strengthen their cyber resilience, streamline data protection, optimize backup and recovery processes, and ensure business continuity in the face of any cyber incident.”

“For organizations navigating today's complex cyber threat landscape, comprehensive cyber resiliency is non-negotiable,” said Stephen Orban, Vice President of Migrations, ISVs, & Marketplace at Google Cloud. “Our collaboration with Rubrik provides customers with the tools and technologies to establish isolated recovery environments on Google Cloud, fortified by the proactive security insights and expertise of Mandiant.”

Achieving Complete Cyber Resilience and Recovery

Precisely designed for Google Cloud, this collaboration delivers:

- **Cloud-Based Isolated Recovery Environment in Google Cloud** – Rubrik, in collaboration with Mandiant, is developing a cloud-based isolated recovery solution on Google Cloud. This solution is designed to enhance organizational cyber resilience by ensuring business-critical data backups are secure from cyber threats and efficiently, safely replicated to Google Cloud via Rubrik's Secure Vault after an incident. By leveraging Rubrik's Data Threat Analytics and Orchestrated Application Recovery Playbooks, combined with Mandiant's periodic security assessments and Incident Response services, it aims to establish a secure recovery environment on Google Cloud, to enable swift core application restoration and business continuity.
- **Strengthened protection of Google Cloud Engine and Google Cloud SQL**– New threat-analytics capabilities are planned for Anomaly Detection, Data Discovery and Classification, Turbo Threat Hunting, and Threat Monitoring. These capabilities are designed to work together to proactively detect cyber threats, accelerate incident response and recovery, and ensure sensitive data remains protected and compliant.
- **Enterprise-grade protection for Google Workspace** – Rubrik's solution is designed for Google Workspace customers, to help them protect their mission-critical SaaS data from cyber threats, insider risks, and accidental deletion, through newly-offered immutable backups, automated anomaly detection, and rapid, granular recovery.

Rubrik's strengthened protection of Google Cloud Engine is available now. New threat analytics capabilities, expanded protection of Google Cloud SQL, expanded protection of Google Workspace, and Cloud-Based Isolated Recovery Environment are planned to be generally available at a later date.
