

**Terex Corporation Conflict
Minerals Report
For Calendar Year Ended December 31, 2024**

Section 1: Introduction and Company Overview

This Conflict Minerals Report of Terex Corporation (“Terex,” “Company,” “our,” “us” or “we”) for the year ended December 31, 2024, is presented to comply with Rule 13p-1 under the Securities Exchange Act of 1934 (“Rule”). Conflict minerals are defined by the Securities and Exchange Commission (“SEC”) as columbite-tantalite (coltan), cassiterite, gold, wolframite, or their derivatives, which are limited to tantalum, tin, tungsten, and gold (collectively “conflict minerals” or “3TG”) for the purposes of this assessment.

Terex is a global industrial equipment manufacturer of materials processing machinery, waste and recycling solutions, mobile elevating work platforms (MEWPs), and equipment for the electric utility industry. We design, build, and support products used in maintenance, manufacturing, energy, minerals and materials management, construction, waste and recycling, and the entertainment industry. We provide best-in-class lifecycle support to our customers through our global parts and services organization, and offer complementary digital solutions, designed to help our customers maximize their return on their investment. Certain Terex products and solutions enable customers to reduce their impact on the environment including electric and hybrid offerings that deliver quiet and emission-free performance, products that support renewable energy, and products that aid in the recovery of useful materials from various types of waste. Our products are manufactured in North America, Europe, and Asia Pacific and sold worldwide.

The Company has a Conflict Minerals Policy that outlines our position statement on conflict minerals and our expectations for suppliers. Our Conflict Minerals Policy is available on our website at www.terex.com under “Company” – “Sustainability” – “Responsible Operations.” The Company also has a Supplier Code of Conduct (“Supplier Code of Conduct”) that includes a section on conflict minerals and our expectations for suppliers. Our Supplier Code of Conduct is available on our website at <https://www.terex.com/en/supplier-code-of-conduct>.

We have relationships with a vast network of suppliers worldwide and we rely on our suppliers to provide information on the origin of any conflict minerals contained in the components and materials supplied to us. As a downstream purchaser, Terex, in most instances, is many steps removed from the smelters and refiners (collectively known as “SORs”) in our supply chain.

Section 2: Reasonable Country of Origin Inquiry

We have determined that certain of our products are likely to contain 3TG, the Company conducted a good faith Reasonable Country of Origin Inquiry (“RCOI”) to determine whether any 3TGs found in its products may have originated in the Democratic Republic of the Congo or an adjoining country (“Covered Countries”) and did not come from recycled or scrap sources. We completed an analysis of our global supply base, including an initial filter based on probability of having 3TG content and a segmentation based on expenditure, to determine which direct suppliers to assess (our “In-Scope Suppliers”). The Company conducted a Conflict Minerals Reporting Assessment (the “CMRA”) with In-Scope Suppliers using the template developed by the Responsible Minerals Initiative (“RMI”) known as the Conflict Minerals Reporting Template (the “CMRT”) to obtain information regarding the SORs that provide materials to the Company’s supply chain.

In 2025, we surveyed suppliers accounting for approximately 95% of our spend and received responses from approximately 60% of the suppliers surveyed. Based on the responses received from In-Scope Suppliers, there is reason to believe that some of our products likely contain 3TG. Because the Company does not have direct relationships with SORs and the Company relies on its suppliers to provide information on the origin of 3TGs contained in the components and materials supplied to the Company, we cannot be certain whether any 3TG in our products originated from the Covered Countries by persons that finance or benefit armed groups in the Covered Countries.

Section 3: Design of Due Diligence Framework

We designed our due diligence measures to be in conformity, in all material respects, with the five-step framework contained in the Organization for Economic Co-operation and Development Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas.

Section 4: Due Diligence Measures Performed

Step 1: Establish Strong Management Systems

As described above, the Company has adopted a Conflict Minerals Policy which is posted on our website. Additionally, we have in place a management system that includes a Conflict Minerals Steering Committee led by our Senior Vice President, General Counsel and Senior Vice President, Chief Financial Officer, and a team of subject matter experts from relevant functions such as supply chain and legal. The team of subject matter experts is responsible for implementing our conflict minerals compliance strategy. Senior management has been briefed about the results of our compliance efforts on a periodic basis. The Audit Committee of the Board of Directors is also supportive of our due diligence process undertaken to satisfy our compliance obligations.

Additionally, we have longstanding grievance mechanisms whereby team members, suppliers, shareholders, and others can report violations of the Company's policies through the Terex Helpline. Our Supplier Code of Conduct notifies suppliers of this Terex Helpline grievance mechanism.

Step 2: Identify and Assess Risk in the Supply Chain

We are part of a complex supply chain, with several layers of companies between the Company and the SORs that may process 3TGs that may ultimately be used in our products. As a result, we rely on our In-Scope Suppliers to provide information on the origin of any 3TGs contained in components and materials supplied to us, which information is gathered via a supply-chain survey, the CMRA, using the CMRT. The Company engaged a third-party subject matter expert ("SME") to assist with surveying our In-Scope Suppliers. In conjunction with the SME, virtual trainings and training materials were provided to the In-Scope Suppliers and members of the Company's supply chain team. Where suppliers identified SORs in their responses, the SME verified the listed entities matched known SORs that conform to the Responsible Minerals Assurance Process ("RMAP") assessment protocols. The SME took additional due diligence measures for any SORs not identified as conformant.

Step 3: Design and Implement a Strategy to Respond to Identified Risks

We have a process in place for handling any potential risks identified in our supply chain. For non-responsive suppliers, there is an escalation process that consists of multiple follow-up inquiries to each supplier surveyed. Each completed survey response is reviewed and any red flags are identified. Depending on the red flag identified, the SME will take further action to investigate the supplier's response. In-Scope Suppliers that were unresponsive, indicated that the origins of the conflict minerals were unknown, provided responses with inconsistencies, or indicated other red flags, were flagged for subsequent follow-up. Members of our Conflict Minerals Steering Committee are apprised of the status of our conflict minerals compliance program, which includes any actual or potential risks or any red flags related to conflict minerals that are identified in our supply chain.

Step 4: Carry Out Independent Third-Party Audit of Supply Chain Due Diligence

Terex does not have a direct relationship with SORs, nor do we perform direct audits of these entities within our supply chain. Therefore, we rely on the RMI's RMAP to manage and report results of the independent third-party audits and the related certification of the SORs.

Step 5: Report Annually on Supply Chain Due Diligence

We report annually on our supply chain due diligence efforts by filing this Conflict Minerals Report with the SEC, which is publicly available on our website at www.terex.com under “Investors” - “Governance” - “Corporate Governance Documents”.

Section 5: Due Diligence Results

Survey Responses

In 2025, we surveyed suppliers accounting for approximately 95% of our spend and received responses from approximately 60% of the suppliers surveyed. The responses received from the CMRA identified 423 unique SORs identified by RMAP, of which 371, or approximately 88%, were validated as conformant or eligible under RMAP. Additional due diligence measures were initiated for any SORs not validated as conformant. No SORs were identified by suppliers as supporting conflict in the Covered Countries.

The large majority of the responses received provided data at the supplier company level and not specific to our supply chain. We were therefore unable to determine with certainty whether any of the 3TG reported was contained in components supplied to us or to validate that any of these SORs are actually in our supply chain.

Smelters or Refiners

The full list of validated smelters and refiners declared by our In-Scope Suppliers is included in Annex 1.

Efforts to Determine the Mine or Location of Origin

The Company’s efforts to determine the origin of mines or country of origin of the conflict minerals in its supply chain include supporting RMI efforts for smelter validation, continued implementation of the due diligence measures described above, and requiring In-Scope Suppliers to submit CMRT information. We have determined that seeking information about 3TG SORs in our supply chain represents the most reasonable effort we can make to determine the mines or locations of origin of any 3TG in our supply chain.

Section 6: Continuous Improvement Efforts to Mitigate Risk

Going forward, the Company intends to take the following steps to improve its due diligence process:

1. Continue to engage with suppliers in an attempt to increase overall supplier response rates and improve the content of supplier responses;
2. Continue to streamline the assessment process and platform; and
3. Continue to work to ensure suppliers acknowledge our Supplier Code of Conduct and support our Conflict Minerals Policy and processes.

The Company has made statements in this Conflict Minerals Report that may constitute forward-looking statements about its plans to take additional actions or to implement additional policies or procedures with respect to its “reasonable country of origin inquiry” and due diligence to determine the origin of conflict minerals included in Company products. The Company undertakes no obligation to update or revise any forward-looking statement, whether as a result of new information, future events or otherwise. The Company’s reporting obligations under the Dodd-Frank Act may change in the future, and its ability to implement certain processes may differ materially from those anticipated or implied in this report. Additionally, the Company relies on its direct material suppliers, which may be many steps removed from smelters or refiners of conflict minerals in supply chains, for information required to meet its reporting obligations. There can be no assurance that the information received from its direct suppliers will be complete and accurate or that when the Company receives such information, it will be able to make a determination as to whether the products manufactured contain conflict minerals originating in certain countries in support of armed groups operating in those countries.

Annex I

The information in the table below has been gathered and transmitted through multiple levels of our supply chain, and there is a risk that it is not accurate or current. In most cases, direct suppliers provided smelter and/or refiner information and therefore any country-of-origin data related to such smelter and/or refiner for their entire supply chain without identifying which smelters and/or refiners may have contributed conflict minerals to components and materials actually supplied to us. Accordingly, we cannot verify that any of the smelters and/or refiners or country of origin data shown in this table actually was part of our supply chain. The presence of a smelter or refiner in this table does not necessarily mean that conflict minerals processed at that smelter or refiner were used in any components and materials supplied to us or in any Company products.
